In the News for the Week:

Hedera Named Finalist for Best Blockchain for Mainstream Financial Services at Future of Finance Awards 2026

The recognition reflects enterprise interest in Hedera's governance model and fee structure.

HBAR Lands Direct Yen Trading Pair on OKCoin Japan

HBAR secured a listing on OKCoin Japan with a direct yen trading pair for the first time, opening access to Japanese investors across one of crypto's most tightly regulated regions.

Hashgraph Accelerates Institutional Tokenization with Asseto

Asseto enables institutions to issue, manage, trade, and settle tokenized assets from a single modular platform, now available on Hedera and HashSphere.

[\[VALOUR COMMENTARY\]](#)

The Future of Finance Awards nomination placed Hedera on a shortlist evaluated for governance, operational efficiency, and enterprise readiness—areas where its Hashgraph architecture differs from traditional proof-of-work and proof-of-stake networks. The Japan developments are particularly notable in combination. OKCoin Japan's HBAR/JPY trading pair opens regulated retail access in one of the world's most tightly regulated digital asset markets, while the FSA's foreign stablecoin framework signals that the infrastructure for broader digital asset integration is now in place. The launch of Asseto, built by ioBuilders on Hedera, signals that institutional tokenization infrastructure is moving from concept to production-ready reality.

This commentary is for informational purposes only and does not constitute investment advice.

[\[HBAR COMMENTARY\]](#)

"Tokenization is becoming an operational priority for financial institutions, but building solutions on top of underlying infrastructure remains complex and resource-intensive. Asseto removes this complexity by giving institutions a ready-made solution that delivers a faster, simpler path to production. At Hashgraph, we're excited to give market participants another way to harness Hedera's best-in-class technology without having to build the solution themselves."

Eric Piscini, CEO at Hashgraph, [Hashgraph Blog](#), June 3, 2026

About SUI - What Is SUI?

Valour Sui (SUI) SEK is an exchange-traded product (ETP) that tracks the price of Sui, the native token of the Sui blockchain. The Sui network is designed for security, scalability, and high performance. Through its unique consensus mechanism, which separates data storage from transaction processing via Narwhal and Tusk, Sui enables fast and efficient handling of large volumes of transactions. Powered by the Move programming language and an object-centric data model, Sui provides a secure and flexible platform for developing decentralized applications (dApps) and smart contracts. Valour Sui (SUI) offers investors exposure to this rapidly growing blockchain infrastructure, which aims to become a cornerstone of the Web 3.0 ecosystem.

[NEWS]

In the News for the Week:

Sui Introduces Confidential Transfers to Prevent Unauthorized Minting and Secure Supply

Sui announced confidential transfers for its layer-1 blockchain that use range proofs to hide amounts while embedding asset supply conservation into the protocol to make unauthorized minting structurally impossible and reduce cryptographic overhead.

Sui Mainnet Halts Resolved After Major Upgrade

As of now, validators have fully addressed the known issues caused by both the original gas-charging bug and the randomness-state bug, and network activity has resumed.

[VALOUR COMMENTARY]

The v1.72 incidents were resolved without loss of user funds or reversal of committed transactions, with disruption limited to transaction processing rather than settled state. The force-close epoch mechanism introduced in response expands the recovery tools available to validators in future outage scenarios. Against that backdrop, Confidential Transfers represent a meaningful capability upgrade. By using range proofs to conceal transfer amounts while enforcing supply conservation at the protocol level, Mysten Labs addresses a key challenge in private payments without introducing the risk of undetectable token creation.

This commentary is for informational purposes only and does not constitute investment advice.

[SUI COMMENTARY]

"Confidential transfers are coming to #Sui. The hard part of private money isn't hiding the amount but guaranteeing nobody can mint value out of thin air while the supply is shielded. We solved it by scoping the cryptography down to one thing: range proofs on transfer amounts. Conservation of supply lives in the protocol, not the proof. Unauthorized mints are impossible by construction."

Adeniyi Abiodun, Co-Founder & CPO at Mysten Labs, X, June 5, 2026

About ONDO - What Is ONDO?

Valour Ondo (ONDO) is an exchange-traded product that tracks the price of ONDO, a governance token originally launched as an ERC-20 on Ethereum. It is also available on other networks, such as Mantle and Solana. Ondo Finance is a DeFi platform focused on tokenizing real-world assets (RWAs), such as short-term U.S. Treasury bonds, in the form of tokens like USDY and OUSG. Ondo is also developing Ondo Chain, a Layer-1 blockchain designed for regulated and institution-focused digital asset markets.

In the News for the Week:

Ondo Finance is Bringing Leveraged Stock Trading On-chain with Ondo Perps, Live June 9

Users will be able to trade tokenized versions of assets like Tesla, Nvidia, and ETFs tracking the S&P 500, with positions they can open, manage, and close at any time.

Ondo Finance Seeks SEC Approval for Tokenized Securities on Ethereum

The request is tied to its Ondo Global Markets platform, which sells tokenized notes that give non-U.S. investors access to U.S.-listed stocks and ETFs.

[VALOUR COMMENTARY]

"Ondo Perps extends the protocol's infrastructure beyond the issuance and custody of tokenised securities into the derivatives layer, enabling eligible non-U.S. users to gain leveraged exposure to U.S. equities on-chain using tokenised assets as collateral. The architecture addresses a longstanding limitation in tokenised equity markets, where participants have often needed to move collateral off-chain or rely on separate venues to access leverage.

Ondo is also pursuing regulatory alignment in parallel, having filed a no-action letter request with the SEC for its Global Markets platform. With more than 60% market share in tokenised equities and approximately \$1 billion in TVL, Ondo enters the derivatives segment from a position of market leadership in the underlying spot market."

This commentary is for informational purposes only and does not constitute investment advice.

[ONDO COMMENTARY]

"The reception we got on the [Ondo Perps] pre-alpha has been overwhelming. Mark your calendars. Real equity perps with stock collateral and tradfi liquidity are coming and will redefine the category."

Ian De Bode, President of Ondo Finance, X, June 2, 2026

About WLD - What Is WLD?

Valour Worldcoin (WLD) SEK is an exchange-traded product (ETP) tracking WLD, the native cryptocurrency of the Worldcoin ecosystem. Worldcoin combines biometric technology with blockchain to enable secure, privacy-focused identity verification and promote universal financial access. Designed for global inclusivity, it supports initiatives like universal basic income (UBI) and fosters equitable participation in digital economies. WLD holders contribute to a vision of accessible and decentralized finance, driving a more inclusive global community.

[NEWS]

In the News for the Week:

Eightco Holdings Discloses 283.5 Million WLD Tokens, Largest Public Institutional Position

Eightco holds over 283 million WLD, approximately 8.4% of circulating supply, the largest publicly disclosed institutional position globally and approximately 36% of the Eightco treasury's assets.

Worldcoin Network Activity Explodes to 2026 Highs

Whale transactions climbed to 64, active addresses hit 1,309, and new wallet creation spiked to 379 — each a 2026 record.

Zoom Opens Beta for World ID Deepfake Verification in Enterprise Meetings

World ID integration aims to help organizations verify meeting participants are genuine humans during high-risk financial, healthcare and executive interactions.

[VALOUR COMMENTARY]

Eightco Holdings' disclosure of 283.5 million WLD tokens—equivalent to approximately 8.4% of circulating supply held within a public company treasury—represents one of the most significant publicly disclosed concentration events in the asset's history. The position creates a meaningful long-term holder within the float at a time when both on-chain whale activity and network engagement are reaching 2026 highs. The convergence of these signals—large-holder accumulation, elevated network activity, and a disclosed public company treasury position—coincided with WLD's 60% weekly gain against a broader market that moved in the opposite direction. The supply-side backdrop further supports the narrative: a 43% reduction in daily WLD token unlocks takes effect on 24 July, reducing daily emissions from 5.1 million to 2.9 million tokens and lowering the volume of new supply entering the market.

This commentary is for informational purposes only and does not constitute investment advice.

[WLD COMMENTARY]

"World ID at its core is an identity protocol, and that identity can hold different credentials. The credential that we care the most about is the human credential, that this person has been verified as a real human or this account has been verified as real human. Because once you have that foundational layer, any other credential that you add on top of that is way more valuable."

Tiago Sada, Chief Product Officer at Tools for Humanity, [Pantera Capital](#), May 28, 2026

About AKT - What Is AKT?

Valour Akash (AKT) SEK is an exchange-traded product (ETP) tracking AKT, the native token of the Akash Network. Akash is a decentralized cloud computing platform that connects developers with unused computing resources, offering a cost-effective and scalable alternative to traditional cloud providers. The AKT token is used for payments, staking, and governance, allowing holders to influence decisions about the platform's operations and growth. By enabling flexible, permissionless access to cloud services, Akash Network supports innovation and decentralization in the digital economy.

In the News for the Week:

peaq and Akash Network Unlock Autonomous Elastic Compute for Robots and Machines

peaq and Akash Network are officially partnering to bring decentralized elastic compute to robots and machines running peaqOS — so they can scale their intelligence autonomously, on demand, without human intervention.

[VALOUR COMMENTARY]

peaq and Akash Network announced a partnership to bring decentralized elastic compute to robots and machines running peaqOS – allowing autonomous machines to dynamically access GPU and CPU resources on demand whenever local hardware isn't enough. Separately, AkashML's sustained throughput of more than 5 billion daily tokens on OpenRouter provided evidence of ongoing production usage, reinforcing the network's position within the rapidly expanding AI infrastructure market.

This commentary is for informational purposes only and does not constitute investment advice.

[AKT COMMENTARY]

"Akash was built so that anyone — or anything — can access compute without permission, without lock-in, and without centralized gatekeepers. Extending that to autonomous machines on any chains through peaq is the natural next step, which connects Akash with millions of new prospective users. Robots and AI agents are about to become some of the largest consumers of compute on earth, and they deserve an open network underneath them."

Greg Osuri, Founder of Akash, [peaq Blog](#), May 28, 2026

[ABOUT]

About ARB - What Is ARB?

Valour Arbitrum (ARB) is an exchange-traded product that tracks the price of ARB, the governance token of the Arbitrum network. Arbitrum is a Layer 2 scaling solution for Ethereum that uses Optimistic Rollups to process transactions more efficiently. It enables faster and cheaper transactions while maintaining compatibility with Ethereum smart contracts. ARB is used for governance, allowing token holders to vote on proposals related to protocol upgrades and the ecosystem's development. The network is widely used in DeFi and aims to make Ethereum-based applications more accessible and scalable.

[NEWS]

In the News for the Week:

Mastercard Taps Arbitrum For Global Stablecoin Settlement

Mastercard has announced a major expansion of its global settlement capabilities, choosing Arbitrum as one of the networks to support its new on-chain infrastructure.

Arbitrum Foundation Unveils \$43.5M Budget Proposal for 2027

The Arbitrum Foundation released a formal funding proposal outlining its operational budget for the 2027 fiscal year, signaling the next phase of financial planning.

Orbs V5 Launches on Ethereum and Arbitrum With L3 Hybrid Design Aimed at Lower DeFi Gas

Orbs has rolled out the V5 upgrade on Ethereum and Arbitrum, introducing a hybrid Layer 3 model that shifts complex DeFi automation off-chain while keeping verification anchored on the two networks.

[VALOUR COMMENTARY]

Mastercard's integration of Arbitrum-based stablecoin infrastructure extends the network's role beyond DeFi, bringing regulated stablecoin settlement into payment flows serving issuers and acquirers across the US and Latin America. Meanwhile, the Foundation's \$43.5 million 2027 budget proposal, with voting beginning on June 8, presents a notable governance test: the request exceeds current annual revenue and will reveal how ARB holders balance ecosystem investment with fiscal discipline. The Orbs V5 upgrade further expands Arbitrum's functionality by adding an execution layer for advanced DeFi automation, including sophisticated order types, liquidity management, and agentic trading workflows.

This commentary is for informational purposes only and does not constitute investment advice.

[ARB COMMENTARY]

"By routing regulated stablecoins like USDC and PYUSD through Arbitrum, Mastercard provides near-instant cross-border velocity for its issuers and acquirers by leveraging the network's multi-billion dollar stablecoin ecosystem.

While various blockchains were chosen for this expansion, Mastercard's decision to leverage Arbitrum underscores an important detail: the next phase of institutional finance can greatly benefit from speed, low-cost, and scale.

Modern finance is becoming programmable, and Arbitrum is built to supercharge that evolution."

Arbitrum Blog, June 3, 2026
